> Italian safety style

There's safe and there's Maxisafe.

QUICKGUIDE

Maxisafe designs, develops, produces and distributes industrial, and safety eyewear for mining, construction and manufacturing industries, armed forces and protective services.

Safety, precision and quality are the result of strictly made-in-Italy research, cutting-edge technology and many controls that the whole supply line undergoes.

Equipped with a valued Research & Development Department and high-tech Production, Maxisafe is the only Company in the world that can offer complete lines of magnification systems and safety eyewear in so different fields (industrial, medical and laser). The interaction among these sectors encourages the evolution of products to original and innovative solutions, always meeting market requests.

Accompanying this, the thorough ergonomic study of frames is combined with extreme care about design for a fresh conception of safety eyewear comfort and style.

Innovative, up-to-date and internationally recognised, Maxisafe is a company in constant growth, supported by adequate distribution networks and qualified personnel. From the over 3000-m² production facility in Northern Italy products are distributed all over the world, maintaining Italian leadership in quality and research.

549

TEXAS

- Basic spectacle developed for generic usage
- Light and handy, made entirely in polycarbonate, weighs only 23g
- Available in H version, certified for small faces
- Certified to AS/NZS 1337.1.2010

Softpad™ is a new patented terminal that added to the arm of the eyewear offers comfort and protection.

Designed by the Internal Research & Development Department, the Softpad™ system provides perfect stability to the safety glasses and full adaptability to the face of the user.

The support of the glasses is entrusted to the whole support area of the arm for a comfortable and stable fit. In addition to the length adjustment (3 positions), the Softpad™ system is not rigidly fixed to the arm but has a further tilting movement that allows the device to fit perfectly to the user's head.

The multiple settings of the terminal, the innovative use of materials and the meticulous design allow full adherence throughout the temple thereby avoiding the concentration of pressure in one place.
